🔗 Portfolio

Summary

Computer Science and Engineering student and Full Stack Developer experienced in building web applications with React, Node.js, Express, and SQL databases. Built AI-powered applications using the Google Gemini API, including semantic search, vector embeddings, retrieval-augmented generation (RAG), and AI chatbots.

Education

B.Sc. in Computer Science and Engineering

2028

Adama Science and Technology University

Adama, Ethiopia

Technical Skills

Languages

JavaScript, SQL

Backend

Node.js, Express, REST APIs, JWT

AI

Google Gemini API, Vector Embeddings, Semantic Search, RAG, Prompt Engineering

Frontend

React, Vite, React Router, Tailwind CSS, Framer Motion, Responsive Design

Databases

MySQL, PostgreSQL

Tools

Git, GitHub, Vercel, Render

Projects

Evangadi Forum – AI-Powered Developer Forum 🔗

React, Node.js, Express, MySQL, Google Gemini API

- Built semantic search using cosine similarity of Gemini-generated embeddings and reused stored vectors to reduce unnecessary API calls.
- Built a PDF-to-RAG pipeline with file validation, text extraction, overlapping chunking, Gemini embeddings, and vector storage in MySQL.
- Built an AI forum chatbot that retrieves information from forum posts and users' uploaded documents and provides responses with source citations.
- Implemented JWT-based user identity and ownership rules, preventing users from answering their own questions.
- Added automatic embedding generation for new posts and a backfill process for existing content.

AI Chatbot 🔗

React, Express, Google Gemini API

- Built a full-stack AI chatbot with React and Express, integrating the Google Gemini API for conversational responses.
- Designed a system prompt to guide the model toward consistent, expert-style responses.
